tone. lift. create

TLC is an off-scalp highlighting system that provides up to 5 levels of lift. In one easy process it tones the hair whilst lifting, allowing you to create multi-tonal highlights - all in up to 12 minutes. It can be used on natural or previously coloured hair.

TLC is a simple system, one lightening powder, 2 activator strengths and 5 pigments, meaning you're free to fully customise your colour results.

## MIXING

TLC Lightening powder – **2 scoops**  
TLC Activator – **2 Scoops**

- 8 Vol = **Up to 3 levels of lift**
- 15 Vol - Mix equal parts 8 Vol and 22 Vol = **Up to 4 levels of lift**
- 22 Vol = **Up to 5 levels of lift**

TLC Pigment – **1 scoop\***  
**\*Up to 2 scoops may be used for maximum tone deposit.**

**1 \***

## APPLICATION

The easy apply formula TLC can be applied using a cap, foils or meche etc. Apply mixed TLC evenly on to each section ensuring enough product is applied to penetrate the hair. Create highlights using your chosen technique. The activation process will commence when medium heat is applied, for up to a maximum of 12 minutes. Visually check every 2-3 minutes until desired result is achieved.

### CAP

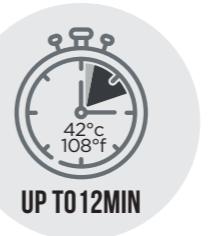

An ideal way to achieve quick and easy highlighting effects is to use a highlighting cap. Using a highlighting hook pierce the cap and pull through strands of hair to desired thickness. Apply mixed TLC and process as per instructions.

## PROCESSING

**REMEMBER** TLC does not expand when developed under a medium heat. This makes it safer and more versatile, meaning all techniques are possible. Pre-heat hair colour processor before developing. Always cover TLC with a plastic cap unless using foil or meche.

Process for between 2 and 12 minutes under medium heat. Check the lift (lightening effect) every 2-3 minutes.

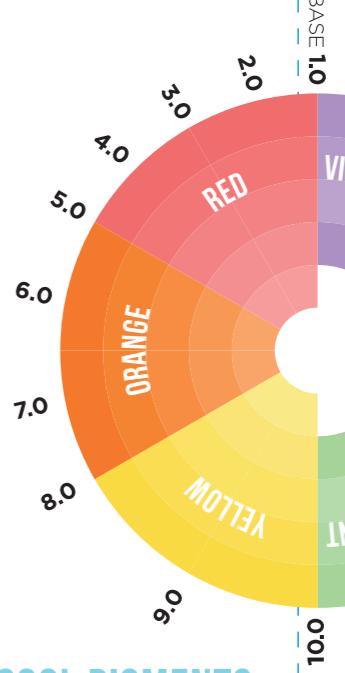

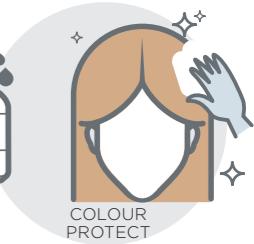

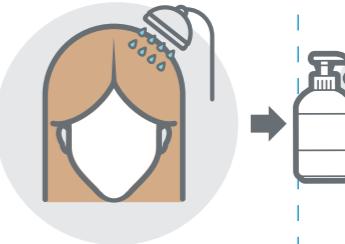

**REMEMBER** TLC must be removed when ready as it will continue to lift if left on the hair.

## REMOVAL

At the end of the development time gently emulsify the colour with a little warm water and rinse thoroughly. Apply a professional colour protect shampoo, massage gently and rinse thoroughly.

Finish with colour protect conditioner or treatment mask, rinse thoroughly and style as normal.

## COOL PIGMENTS SUBDUE WARM TONES

The colour star above shows how to identify the tones found in bases 1.0 to 10.0 and the opposing TLC pigment that can be used to subdue these warm tones. **EXAMPLE** Use TLC Green pigment to subdue red tones in a base 3.0.

## WARM PIGMENTS ENHANCE WARM TONES

**REMEMBER** The warm TLC pigments will create subtle tones of blonde. Not bright red or orange results as their pre-mixed appearance might suggest.

*tone. lift. create*

**DE** TLC ist ein Strähnchensystem, mit dem naturbelassenes oder gefärbtes Haar um bis zu 5 Tonhöhen aufgehellt werden kann. Das Haar wird in einem einzigen Arbeitsschritt gefärbt und aufgehellt - mit TLC gelingen Strähnchen in unterschiedlichen Farbtönen im Handumdrehen, und das in nur 12 Minuten.

Das einfache System mit 1 Aufhellpulver, 2 Activator-Stärken und 5 Pigmenten sorgt für maßgeschneiderte Farbergebnisse.

#### MISCHUNG

TLC Lightening Powder – **2 Messlöffel**

TLC Activator – **2 Messlöffel**

- 8 Vol. = **Aufhellung um bis zu 3 Tonstufen**

- 22 Vol. = **Aufhellung um bis zu 5 Tonstufen**

TLC Pigment – **1 Messlöffel** Für eine maximale Farbeinlagerung können bis zu 2 Messlöffel beigelegt werden.

Es sind 5 TLC Pigmente erhältlich. Der Farbstern auf dem Merkblatt hilft Ihnen beim Zuordnen der Komplementärfarben. BEACHTEN SIE: Rote und neutrale Pigmente sorgen für sanfte Blondtöne, nicht Hellrot oder Orange, wie die Farbe der Pigmente vermuten lässt.

#### ANWENDUNG

Die benutzerfreundliche Rezeptur von TLC bietet viele Anwendungsmöglichkeiten: auf der Kopfhaut, mit Folien, mit Spatel etc. Die TLC-Mischung gleichmäßig auf alle zu färbenden Haare auftragen. Eine ausreichende Menge verwenden, damit die einzelnen Haare von der Mischung umgeben sind.

**STRÄHNCHENHAUBE** Mit einer Strähnchenhaube erhalten Sie schnell und einfach perfekte Strähnchen. Die Haarsträhnen in der gewünschten Stärke mit einer Strähnchenadel durch die Haube ziehen. Die TLC-Mischung auftragen und wie beschrieben einwirken lassen.

#### EINWIRKZEIT

**BEACHTEN SIE:** TLC quillt beim Mischen bei mittlerer Hitze nicht auf. Das macht die Mischung sicherer und sorgt für Vielseitigkeit - alle Techniken sind möglich. Trockenhaube/Climazon vor dem Mischen vorheizen. Die behandelten Haare immer mit einer Kunststoffhaube abdecken - außer bei Verwendung von Folie oder Mèche-Folie.

Zwischen 2 und 12 Minuten bei mittlerer Hitze einwirken lassen. Aufhellung alle 2-3 Minuten prüfen.

#### ENTFERNUNG

Mit Wasser und Shampoo gründlich ausspülen, mit Farbschutzshampoo und Conditioner behandeln und wie gewohnt stylen.

**ES** TLC es un producto para crear mechas, sin tocar el cuero cabelludo, que proporciona hasta 5 niveles de reflejos. En un sencillo paso único, colorea el pelo al tiempo que aporta reflejos, permitiéndole crear unas mechas multitonos, y todo en menos de 12 minutos. Puede usarse en el pelo natural o teñido.

TLC es un sistema sencillo con reflejos en polvo, 2 activadores y 5 pigmentos, lo que significa que le permite personalizar totalmente los resultados de sus tintes.

#### MEZCLA

Mechas en polvo TLC – **2 medidas**

Activador TLC – **2 medidas**

- 8 Vol. = **Hasta 3 niveles de reflejos**

- 22 Vol. = **Hasta 5 niveles de reflejos**

Pigmento TLC – 1 medida. **Se pueden usar hasta 2 medidas para conseguir un tono máximo.**

Existen 5 pigmentos TLC disponibles. Para identificar correctamente el tono opuesto, vea la tabla de colores en el folleto adjunto. RECUERDE: Los pigmentos rojos y neutrales dejan en el cabello tonos sutiles de rubio, y no rojo o naranja intenso como sugiere la apariencia premezcla

#### APLICACIÓN

Esta fórmula de uso fácil se puede aplicar en el cuero cabelludo, sobre papel de plata, con espátula, etc. Aplique el producto TLC mezclado de forma uniforme en cada sección asegurándose de que aplique suficiente producto para que penetre en el pelo.

#### GORRO

Una forma ideal, rápida y fácil de conseguir unos buenos reflejos es usar un gorro para mechas. Haga unos agujeros en el gorro con un gancho para mechas y saque la cantidad de pelo deseada a su través. Aplique la mezcla TLC y proceda como indican las instrucciones.

#### PROCESO

**RECUERDE** TLC no se expande cuando se aplica con poco calor. Esto lo hace más seguro y más versátil, es decir, que todas las técnicas son posibles. Caliente el secador/climazón antes de usar. Cúbralo siempre con un gorro de plástico excepto si usa papel de plata o mechas.

Proceda entre 2 y 12 minutos a calor medio. Revise el efecto del reflejo cada 2-3 minutos.

#### RETIRADA

Aclare bien con agua, lave con un champú y acondicionador para cabello teñido y peine normalmente

**NO** TLC er et off-scalp stripesystem med opp til 5 løftenvåær. Med den enkel prosess toner produktet håret samtidig som det løfter, slik at du kan lage stripere i flere fargetoner – alt på opp til 12 minutter. Produktet kan brukes på naturlig eller tidligere farget hår.

TLC er et enkelt system, med ett løftepulver, to aktivatorstyrker og 5 pigmenter, slik at du står fritt til å tilpasse fargeresultatene akkurat slik du vil.

#### BLANDING

TLC Lightening powder – **2 skjeer**

TLC Activator – **2 skjeer**

- 8 vol = **opp til 3 løftenvåær**

- 22 vol = **opp til 5 løftenvåær**

TLC pigment – 1 skje **For maksimal tone kan du bruke opp til 2 skjeer.**

Det finnes 5 tilgjengelige TLC-pigmenter. Se fargestjernen vår i brosjyren for å få hjelp til å identifisere motstående fargetoner. HUSK: Røde og naturlige pigmenter gir håret lette toner av blond, ikke rødt eller oransje slik det kan se ut før blanding.

#### PÅFØRING

Denne brukervennlige formelen kan brukes på hodebunn, folier, spatel osv. Bruk blandet TLC jevn fordelt på hver seksjon, slik at det påføres nok produkt til at det trenger inn i håret.

#### HETTE

Ved å bruke en stripehette lager du stripere raskt og effektivt. Bruk en stripe-krok til å trenge gjennom hetten og trekk gjennom hårstrålene til ønsket tykkelse. Bruk blandet TLC og behandle iht. anvisningene.

#### BEHANDLING

**HUSK** TLC utvides ikke når det utvikles under middels varme. Det gjør at det er sikrere og mer allsidig, hvilket betyr at alle teknikker kan brukes. Forvarm tørkeren/climazone før utvikling. Dekk alltid TLC med en plasthette, med mindre du bruker folie eller netting.

Skal virke i mellom 2 og 12 minutter under middels varme. Sjekk løftet (lysningsgraden) hvert 2.-3. minutt.

#### FJERNING

Skall godt med vann, sjørøpner og balsamer med farbeskyttende sjampø og balsam, og form som vanlig.

# WELCOME TO THE NEW WAY TO TONE, LIFT & CREATE!

TLC is an **off-scalp** highlighting system that provides up to **5 levels of lift**. In one easy process it **tones** the hair whilst **lifting**, allowing you to create **multi-tonal highlights** - all in up to **12 minutes**. It can be used on natural or previously coloured hair.

TLC is a simple system, one **lightening powder**, two **activator strengths** and 5 **pigments**, meaning you're free to fully customise your colour results.

## WHY TLC?

- ✓ Time saving and efficient (no need to tone after bleaching)
- ✓ Lift and tone in one easy step with up to 5 levels of lift
- ✓ Cool tones to neutralise and warm tones to lift - without the need for extra toning separately
- ✓ Process and develop in only 12 minutes
- ✓ Leaves the hair looking healthy and shiny

THE NEW WAY TO TONE, LIFT & CREATE

## WHY IT WORKS FOR ME

**"TLC is a great product. It's quick and easy to use and removes the need for additional toning.**

For example, if a client has underlying orange or copper tones and wants to achieve a clean blonde look, the addition of the blue pigment into the mix will neutralise the warm tones during the lifting process. Thus giving you the perfect clean blonde result with no need for separate toning.

Emma  
(LONDON)

TLC also leaves the hair looking healthy, shiny and more like a high lift tint rather than the raw looking finished result of normal bleaches.

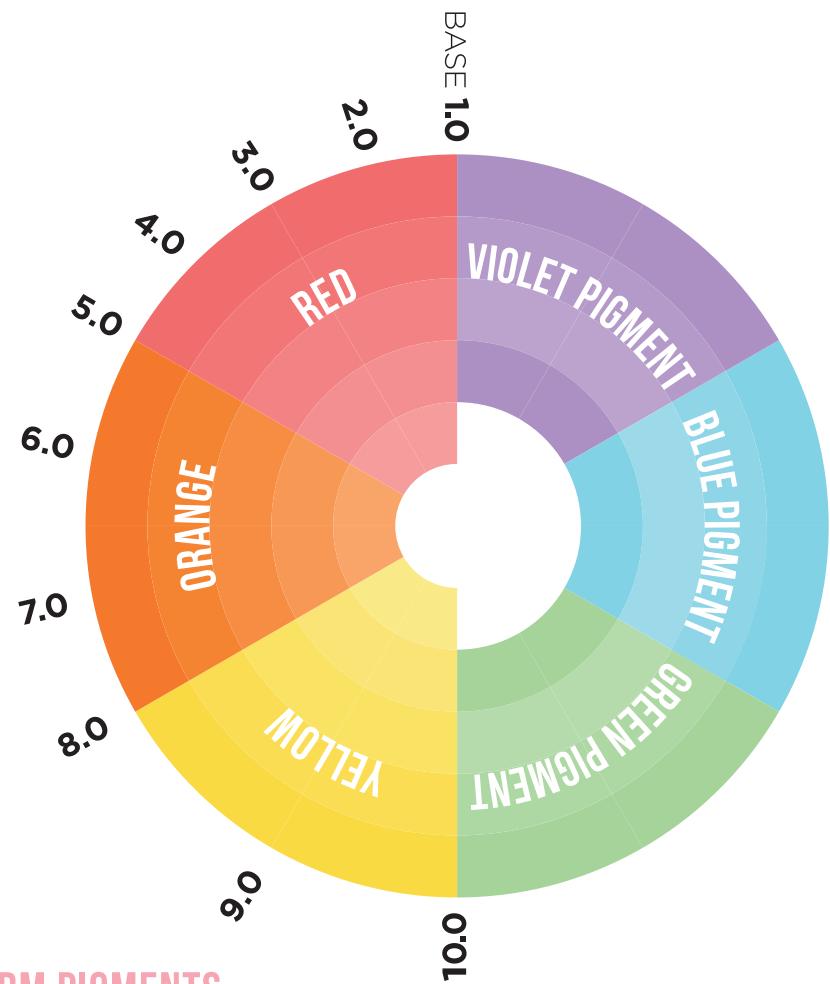

With less than 12 minutes for the treatment (with a little gentle heat) it also makes it super quick to use."

## TLC COLOUR WHEEL

### COOL PIGMENTS SUBDU WARM TONES

The colour wheel below shows how to identify the tones found in bases 1.0 to 10.0 and the opposing TLC pigment that can be used to subdue these warm tones.

**EXAMPLE** Use TLC Green pigment to subdue red tones in a base 3.0.

### WARM PIGMENTS

#### ENHANCE WARM TONES

**REMEMBER** The warm TLC pigments will create subtle tones of blonde. Not bright red or orange results as their pre-mixed appearance might suggest.
